Objective of the case:

Analyze the use and management of the PDO "Bocadillo Veleño" through a case study, identifying the opportunities for territorial development through this type of certification.

Some Findings

- PDOs are based on the association with the place of origin, they create a unique differentiation that cannot be imitated and the attribute of origin cannot be duplicated.
- Social sustainability is a critical dimension in the case studies.
- Governance, partnership, trust and cooperation are fundamental to the efficient use of the PDO.

Methodological description

Table 1. Design of the case study using Yin's methodology. (2003)

Case Type: Unique with multiple units of analysis.

Research Question: How can a seal of origin promote territorial development?

Tools: Informed consent, questionnaires, semi-structured interviews, databases, public policy documents at national, regional and local levels.

Criteria for interpretation of results: Triangulation of information

Analysis Unit	Theoretical Proposal				
History of obtaining DOP's Seal	Knowing the past facts allows us to identify the system and events that were able to consolidate and obtain the seal of origin.				
Use and management of the DOP	The correct governance and institutional framework are key to the functioning of a seal of origin.				
Level of trust and cooperation	Cooperation and trust among stakeholders can energize endogenous networks				
among stakeholders	and lead them to participate in global arenas.				
Proposal of projects to guide the	The development of projects duly articulated with the different actors in the				
proper use of the "Bocadillo	sector (quadruple helix) are catalysts for the proper use of seals of origin.				
Veleño's " DOP

Main shortcomings of the system according to participating stakeholders

Main obstacles of the system.

A continuación por favor marque con una X las Instituciones con las que ha tenido, presenta o le gustarla establecer vinculos para el desarrollo de proyectos y actividades comerciales.

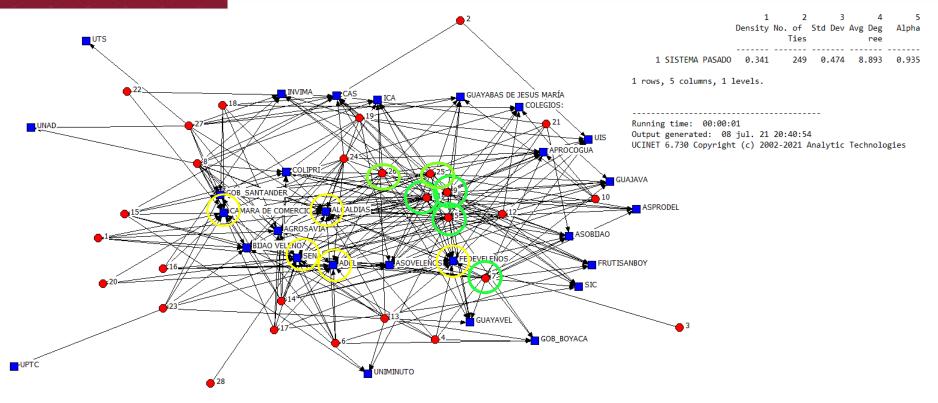

Se entiende como proyecto un conjunto de ideas y objetivos que se desarrollan con el fin de dar solución a un problema o lograr una oportunidad de mejora a nivel de las operaciones de la empresa y el producto y/o servicio

Se entiende por actividades comerciales a aquellas transacciones o intercambio de productos y servicios entre Instituciones o empresas.

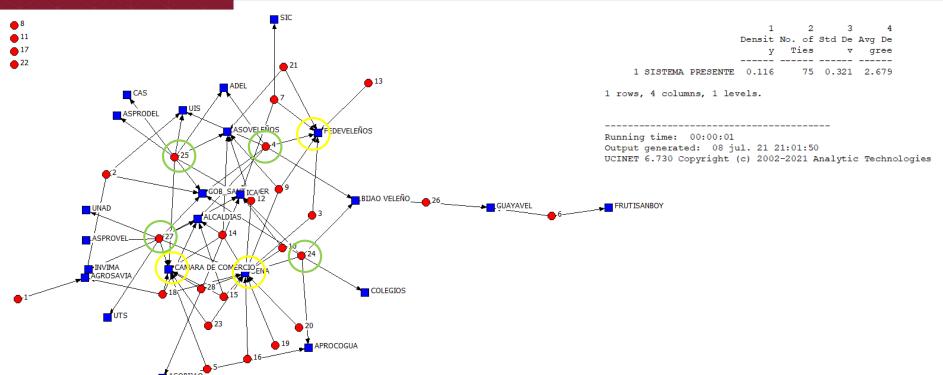

En colaboración con los proyectos o actividades comerciales realizadas con el sistema agrícola y por ende con la DOP, por favor, responda lo siguiente:

He realizado proyectos o actividades comerciales con:		A cuales de las siguientes entidades conoce y <u>acordarla</u> una reunión, si coincidieran en un espacio de trabajo		Estoy realizado por lo menos 1 proyecto o actividades comerciales con:		Entidades que de acuerdo con sus intereses, ¿desea conocer para hacer un proyecto?		No me gustarla realizar proyectos o actividades comerciales con

Proposal of projects to catalyze local development

Endogenous Capabilities

"Cultural Heritage".

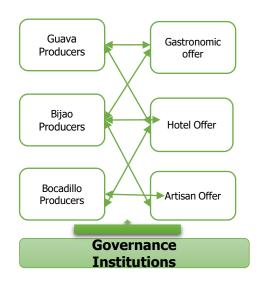

Decrees and ordinances for the protection of folklore.

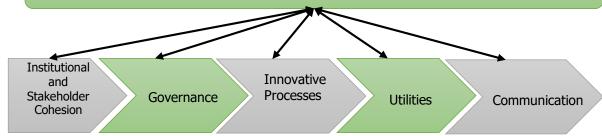

"Intangible cultural heritage of the nation"

Proposal of projects to catalyze local development

Building from the territorial base/Needs

Key factors for project proposals at the territorial level

- Internal and external alliances
- Working Tables
- ❖ Agribusiness training (export) (Reduce supply chain)
- ❖ Tourist route
- ❖ Circular economy of the bijao agroindustry: NTC, Research
- ❖ Appropriation of the use and benefits of the D.O.
- ❖ Fair Trade
- Inclusion of professorships in universities and education centers (generational change).

Conclusions

- ✓ PDO alone is no guarantee of development. It requires the articulation and systematization of territorial forces, policies and strategies.
- ✓ Stakeholders in the system do not yet understand the importance of the PDO.
- ✓ It was possible to articulate the actors in the formulation and development of projects to strengthen the system and promote the use of the PDO.
- ✓ The research exercise made it possible to identify the past and present state of the system, differentiate the density of the network and design strategies to strengthen the relationship and collaboration between actors.

Conclusions

- ✓ Sensitization of the stakeholders: when the results were socialized and graphically observed, they showed interest in reestablishing the connections and collective work was initiated for this purpose.
- ✓ It was shown that a higher density of the network and greater links achieved better results for the system, currently there are very few results in the development of projects, the application for the use of the PDO of the Bocadillo veleño has been paralyzed and the actors have been dispersed.
